

# DÉCOUVERTO

## THE FOREST AUDIO GUIDE

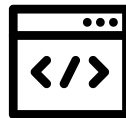

Android and iOS application by  
**Cédric JUNG**

### WHAT IS DECOUVERTO APP ?

An audio guide app to be used in the forest during a hike. This app is published on iOS and Android, now more than 400 hikes are available with more than 3000 downloads each week.

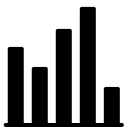

### HOW IS DESIGNED DECOUVERTO ?

DécouvertO app is created using React Native and deployed to iOS and Android.

The data for a hike is provided by the *decouvertO.fr* website, which I have also coded in Nodejs and Angular.js.

### HOW MANY PEOPLE USE DECOUVERTO ?

DécouvertO is used by 300 users each week (mostly in the *Grand Est*, France).

The application has been used by several thousand people after the various lockdowns of the covid-19 crisis. This shows the appetite of people for the forest and outdoors after periods of lockdown. The application has become known for its quality in the *Grand Est*.
